

HIGH DEFINITION Power Meter Systems

Every Revolution is a Revelation

A power meter is a necessary training tool for any level of cyclist with a passion to improve! It is the only device that can measure your effort instantaneously in real time to help you get fitter, faster.

Discover Strengths, Uncover Weaknesses

Pioneer's Dual Leg Power Meter is the most advanced dual leg power meter system on the market. It goes beyond the standard ANT+ power metrics by measuring force in all directions at 30 degree intervals, 24 times per rotation, helping develop pedaling balance and minimize power loss. Pioneer Power Meters measure power and force direction in real time, so you can analyze and adjust your technique while you ride.

HD Power Metrics

Pioneer has created the only Power Meter to measure force and direction of force while pedaling. When used with a Pioneer Cycle Computer, these measurements are graphically displayed as force vectors. These force vectors allow you to analyze the unique characteristics of your pedal stroke and calculate pedaling efficiency in real-time while you ride.

cyclo-sphere **TRAININGPEAKS™** **STRAVA**

Works With any Ant+ computer

The Pioneer Power Meter can easily pair with any ANT+ compatible sports watches and cycle computers, displaying power measurements available on that computer. For the full range of HD Power Metrics including force vectors, torque vector, and other data, the Pioneer Power Meter must be paired with the Pioneer Cycle Computer.

Pioneer's Preinstalled Dual Leg Power Meter

Available on new completed Flagship SHIMANO® DURA-ACE® R9100, DURA-ACE® 9000 and ULTEGRA® 6800 11-speed cranksets.

Pioneer's Power Meter Kit

Ship | Install | Return

An affordable dual leg or single leg power meter solution for cyclists who already own compatible cranksets or crankarms. Cyclists can now ride with power in a few easy steps. Once the desired power meter kit is purchased from an authorized retailer, the consumer's new or used crankset is put in the box and shipped directly to Pioneer's installation center, where Pioneer's advanced power meter technology is installed. Pioneer has performed the ship, install, and return procedure for over two years and the efficient system facilitates a quick turnaround of the cyclist's crankset or crankarm with a power meter. Throughout the entire process, Pioneer keeps in constant communication with the dealer.
